

Quel est l'animal qui ne pond pas d'oeuf ?

Réponse le castor

En effet, normalement les mammifères ne pondent pas d'oeufs ! Il y a néanmoins deux exceptions : l'ornitorinque et l'échidné.

Ces animaux pondent des oeufs :

- Les reptiles (crocodile, serpent, tortue)
- Les amphibiens (grenouille)
- Les poissons
- Les insectes (fourmi)
- Les mollusques (calamar)
- Les oiseaux (poule, autruche, d'ailleurs l'autruche pond les plus grands oeufs)
